

Of [redacted] K. [redacted] P. [redacted] June 15th, 1916.
To [redacted] of Mindanao.

1. For a number of years rumors and reports have reached our ears that a fissure from which smoke issued existed on the mountain range south of Lanao; but it is believed Lt. Donnelly is the first government official who has actually seen the fissure.

The recent eruption of ashes and newly burned vegetation shows this volcano, long dormant is now again becoming active.

RECEIVED

Hdqs. Dist. of Mindanao, Zamboanga, July 14, 1916.
To Executive Inspector, Manila.

1. We should have this Pinapayungan volcano definitely located on our maps before long. Lieut. Donnelly deserves the credit for having been the first white man to discover it.

2. When the country is a little bit better under control possibly some scientist from Manila would like to look into it a little more carefully.

Peter E. Traub
