Weather Bureau  
Manila, P. I.

Sir:

I have the honor to inform you that last night at about 8 o'clock an strong earthquake has been felt here in Dingalan Bay, Taybas. A great noise has been heard, and its duration is from 3 to 5 seconds. The water in a pail and in a chamber pot (orinola) has been thrown out. Some bottles of medicines and can foods in a store has fallen down from the stand. By this effects, you can imagine more or less the intensity of this earthquake. About 30 minutes after the strong one, another quake has been felt but of an slow motion.

The weather in this place is sometimes cloudy, shiny but with strong wind from NW. Sometimes it rains in this place.

Can you write me the center of the earthquake mention above, and its cause? Is there any damage in some places.

Sincerely yours,

Dr. A. H. Abern
