No. 2

Surigao May 10, 1929.

The Director Weather Bureau,
Manila.

S i r :

To help Astronomers and for the interest of the general public I took the above photographs of the eclipsed sun of yesterday at two different times. I used a 28 inches focal length lens giving the smallest diaphragm with a color filter to avoid halation. The No. 1 picture was a snapshot with a color filter while the No. 2 was a one fifth second time exposure without color filter.

I hope these pictures will be of some use to you and should you ever need my help I shall be more than willing to assist you by sending you pictures.

Yours for pictures

Jesus Servillas
