

Pittsburgh, Pa, April 15th Eve, Letter from John, Henry, Waym.

Mr Miguel, Selga, Dear Sir, your letter received on April 12th, but this Eve, April 15th, hence my letter cannot reach you in time for t considering the Time it took for your letter and Maps to reach me, so a Telegraph, in least possible words, Forecast, Part Cloudy, probably Clearin by time of Eclipse, there will be Clouds that might interfere with Photograph March 11th will be your standard to go by, "your Cloudy, Pt Cloudy Etc are different than used in the United States, You should make your Maps contain a larger area to the South and west, for your Weather, You do not need Japan Etc Sure this is your matter, now take your Map of May 9th and consider it with - March 11th, note the comparison, this is 59 Days, consider the Hour of the Map observation and the Hour of the Eclipse, nearly 6 hours, or more,

You should have Sumatra and Siam in and on your Map Area to get the Southwest ern Storms A Day beforehand, they are your most severe Storms, China is alright for your Northwest coming, now I hope you will become more interesting, for on day of Eclipse the Clouds will come from your Southwest, and really should be cleared by Eclipse time, but as the China Sea shows nothing, to work on.

if at any time in the future you want more or full explanation in this just let me know, the Turn from the Southwest coming to your Islands will be on May 12th, now as this may not even get there by that time, sorry, it sure is slow mail, it should not take more than 15, 20 Days, and even better than that.

your letter and Maps took 30 Days and 34 Days respectively, I really was surprised, must have went all the way around Africa, hence I telegraph.
