

February 3, 1911

Mr. V. E. Sison  
Rosales, Pangasinan

Dear Sir:

I am glad to know that you were fortunate to see the comet on February 1st in the evening. The comet you saw was not the Cunningham's Comet, but was another comet discovered by Mr. A. A. McIntosh at Auckland, New Zealand. The Cunningham Comet rises in the morning about the same time as the sun; because of the glow which precedes the sunrise and because of the clouds near the eastern horizon, it is difficult, and at times impossible to see the Cunningham Comet. The new comet is brighter, shows a fairly well developed tail. Keep on observing it and let me know your results.

Wishing you success, I remain,

Sincerely yours,

MIGUEL SELGA  
Director, Weather Bureau
