CANDELARIA TAYABAS, P. I.

Report for Typhoon

November 27, 1934.

The Director,
Weather Bureau
Manila, P.I.

Dear Sir:-

Rumors has been rampant among the ~~the~~ common masses in this locality right after the typhoon last Nov. 15, that another typhoon is forthcoming before the end of the month. It is said that this coming typhoon is even more severe than the former and is characterized by a big flood. This locality according to the belief will be submerged in water some three meters deep although I know no big river to overflow likewise in Mauban, Tayabas. This belief is made stronger in the minds of the people by a coincidence of the occurrence of earthquake last night at about nine o'clock, which probably you are already aware of.

Now, since the undersigned considers you the only best authority on this matter, I hereby seek your comment with regards to this matter. As the belief has been formed without any scientific basis which led me to doubt, but because of the excitement of the people, so I was forced to consult you. Also please inform me as to the cause, origin, and extent of the last earthquake.

Hoping that you will give this matter your kind attention and oblige, I remain

Very respectfully yours,

M. C. Ramos

Mariano C. Ramos

P.S. Enclosed herewith is a 2-centavo postage stamp which you may use in replying.
