

February 5, 1941

Srgt. Ignacio P. Belen
Municipal Police Force
Malolos, Bulacan

S i r :

The bright object seen from February 2nd and on is a comet with a definite head and well developed tail. It has no special significance. It is a celestial body shining with a light received from the sun. I hope the people will dispel from their minds the superstitions that connect the appearance of a comet with the activities of man. The comet will be visible for several days and will set about 10 p.m. It becomes visible as soon as darkness sets in.

Very respectfully,

MIGUEL SELBA
Director, Weather Bureau
