

80  
Kabankalan, Negros Occidental, I. F.

May 20, 1929

The Director of the weather Bureau.

Manila, P. I.

Sir:

The following datas were recorded by the writer during the sun's total eclipse on May 9, 1929, in this town. I used for my observation a BERGER transit. The first contact was well taken due to the good atmospheric conditions and the fourth contact was too. During the second and the third contacts the sky became cloudy on the north western thus preventing me to get a good view of it.

In this town the sun's eclipse was not total leaving a small crescent which is shown in the following diagrams.

The eclipse was total in the town of Himamaylan.

Hoping that with this insignificant tribute I had done my best for science.

Yours respectfully,

*Manuel J. Albayda*
