Group IV - Visibility of Stars and Planets.

By Mrs. Soledad Lotilla Grasparil

I saw seven stars, the Evening Star which was the brightest of them and six other stars whose names I do not know. They were all bright. The sky was clear.

Group V - Effects of the Eclipse on Animals and Plants. By Mrs. Juana de Lotilla and Mr. Agaton S. Grasparil.

The animals and plants behaved very differently. The cocks crowed. The hens went home to roost. Many chickens stopped feeding and <sup>cried as if night had come.</sup> ~~settled down~~. The dogs barked and the bats flew <sup>about</sup> ~~back~~ to their habitats.

The leaves of the acacia ~~winkled~~ shrank to sleep and the shadow of the tree assumed a strange appearance. Half moons could be seen in the shadows of both the trees and the <sup>barro</sup> walls. Evening crickets chirped.

Respectfully submitted,  
Agaton S. Grasparil  
Principal, Sibolom Elem. School.
