

January 16, 1941

Mr. Alfredo Q. Gonzalez
P. O. Box 9
Jaro, Iloilo

S i r :

Reference is made to your letter regarding the Cunningham comet. The comet is not visible now, because it sets about the same time or earlier than the sun. Throughout the night it is below the horizon. Towards the end of the month, the comet is expected to rise an hour earlier than the sun. If the glow that precedes the sunrise is not very bright, the comet may be visible, one hour before sunrise, towards the east, in the constellation of Sagittarius.

Very respectfully,

MIGUEL SELGA
Director, Weather Bureau
