

Isabela Sugar Co., Inc.
Isabela, Occ. Negros,
May 9, 1929.

Director of Weather Bureau,
Manila, P. I.

Dear sir:

I am sending herewith our observation for the May 9, 1929 solar eclipse. The place is more or less 83 Kilometers from Talisay the path center of the eclipse.

The following things had been noted:

When the sun was entirely hidden by the moon, one prominent star was seen brightly shining and we supposed it as Jupiter according to the diagram that appeared in ~~The~~ Tribune. The birds twittered and chickens entered their fold. The temperature was notably cold.

I hope that this little observation would help you in your scientific research.

Yours respectfully,

GUADALUPE R. GERONZA.
